ABOUT CONTINUUS

CONTINUUS Pharmaceuticals is a spin-out company from the Novartis-MIT Center for Continuous Manufacturing. We design and develop innovative continuous manufacturing processes for pharmaceutical clients, providing an exceptional "one-stop solution" for the entire drug development and manufacturing cycle.

Rather than producing medicines through traditional batch processes, CONTINUUS offers a breakthrough Integrated Continuous Manufacturing (ICM) technology for small molecule drugs. The synthesis of the active pharmaceutical ingredient and final dosage form are integrated into a seamless and completely automated process. This novel method will allow "on-demand" manufacturing of pharmaceuticals with significant advantages in production lead time, quality, and cost.

Our pipeline is rapidly growing, with exciting projects with pharmaceutical and generic companies, as well as contracts with the US Government. Concurrently, we are transitioning to a commercial phase, where we will leverage our novel ICM platform to produce low-cost, high-quality drugs for patients worldwide. Essential to our evolution will be talented new team members who will contribute greatly to this mission. We look forward to meeting you.

Buyer Planner GXP Manufacturing and Lab Operations

Job Description

CONTINUUS is looking to hire Buyer Planner to establish a best-in-class Logistics group supporting Laboratory R&D operations and a new end to end integrated continuous manufacturing facility located in the greater Boston area.

Overview

- The Buyer Planner leads end-to-end supply chain activities for the Technical Operations Group. This is a new, high-profile, and progressive role will establish the CONTINUUS Pharmaceutical Logistics Supply Chain.
- Responsible for all day-to-day activities focused on the procurement, planning and delivery of assigned material and suppliers.
- As a Materials Buyer/Planner Specialist, you will be responsible for:
- Interfacing with Production, Planning, and suppliers to schedule the receipt of material to meet production demands.
- Scheduling materials, updating delivery dates, procurement follow-up and expediting suppliers.
- Evaluating and driving resolution on all manufacturing material quality and supply issues.
- Working with the operations team to convert the demand plans into physical orders. Understands business trends, opportunities and how they impact the demand forecast.
- Analyzing incoming demand identifies order exceptions, misalignment with product rationalization strategy and opportunities to utilize existing inventory.
- Planning and schedules order timelines to be consistent with customer requirements while minimizing inventory and shipping costs.
- Working with the Product Line/Sales/Service Delivery to prioritize deliver dates as needed (push outs, pull-ins).
- Implementing inventory stocking strategies.
- Monitoring levels of safety stock, global and ageing inventory and works with regions and manufacturing plants to address accordingly.
- Evaluating current and anticipated requirements, determining potential risks and managing suppliers to meet business needs.
- Determining overdue risks as it relates to parts, identifying key drivers and managing plans to mitigate those risks.
- Develop the annual and quarterly Key Performance Indicators (KPIs) to propel business results and to serve as early warning signs of problem performance e.g. inventory health, schedule adherence.
- Work with IT and Procurement to identify and standardize around a core set of information system solutions and data analytics platforms.

Required Qualifications

- Must Have 5+ years of relevant supply chain management experience. Have a bachelor's degree in Supply Chain Management or related field or equivalent experience.
- Have experience in order management, inventory optimization and management, asset utilization and management.
- Have intermediate knowledge of QAD – SAP/Oracle and MRP functionality. Have strategic thinking with tactical execution with a sense of urgency.
- Be able to work with and influence stakeholders.
- Experience in GMP-regulated environment (Life Science, Pharma, Med Device, etc.).

- Experience with DEA Regulated Drugs and Schedule Material, Strong eye for business and problem-solving capabilities.
- Ability to link the critical business supply chain, systems, and processes needed to achieve forecast accuracy.
